Nishchay Sharma

chandigarh, Chandigarh nishchay340@gmail.com 8580800643 in/nishchay-sharma-64b0661b3 nishchay.online

SUMMARY

Full-stack JavaScript developer with **3+ years of experience** designing and building **15+ production and experimental applications** across healthcare, ERP, fintech, marketplaces, and SaaS platforms. Experienced in **MERN and MEAN stacks**, developing scalable backend architectures with **Node.js, Express/NestJS, and MongoDB**, and building modern frontend applications using **React, Next.js, and Angular**.
Skilled in **system architecture, API design, database modeling, and cloud deployment on AWS**, with hands-on experience delivering end-to-end products from **UI development to DevOps and production deployment**. Worked on complex platforms including **EHR/RCM healthcare systems, ERP manufacturing software, marketplaces, survey platforms, and SaaS tools**, following standards such as **HIPAA, HL7, and FHIR**.
Strong interest in **AI-assisted development, advanced prompting techniques, and building scalable product architectures**, with a focus on creating reliable, high-performance software systems.

EXPERIENCE

Full Stack Developer

Rowthtech **May 2023 - Present, Chandigarh**

- Developed and maintained scalable full-stack web applications using **Node.js, Express, React, Next.js, and MongoDB**, delivering responsive and high-performance user experiences.
- Designed and implemented **RESTful APIs and backend services**, including authentication, role-based access control, and optimized database schemas.
- Built dynamic and reusable frontend components using **React, Angular, JavaScript/TypeScript**, improving application performance and maintainability.
- Managed deployments and basic DevOps tasks including **server setup, Nginx configuration, CI/CD workflows, and cloud deployments**, ensuring reliable production releases.

Software Engineer Intern

Rowthtech **January 2023 - May 2023, Chandigarh**

- Built RESTful APIs using **Node.js and Express.js** and integrated them with **React.js** frontend applications.
- Designed and managed **MongoDB schemas with Mongoose**, ensuring efficient data handling and validation.
- Implemented **JWT-based authentication and role-based access logic** while following clean code and Git workflows.

PROJECT

Probill RCM

probillrcm.com

- Architected and developed the **backend architecture** for a full-scale **RCM (Revenue Cycle Management) and EHR platform**, handling patient records, billing workflows, and provider management.
- Designed and implemented **scalable RESTful APIs using Node.js, Express/NestJS and MongoDB**, supporting modules like patient registration, claims processing, appointments, and medical billing.
- Integrated **healthcare interoperability standards** including HL7 and FHIR for secure healthcare data exchange.
- Implemented **secure authentication, role-based access control, and data protection aligned with** HIPAA **compliance requirements**.

A-Tech Fabrication Order Tracking software

atechaustralia.com.au/

- Architected and developed the **backend system** for a fabrication order tracking platform supporting manufacturing workflows, project tracking, and logistics coordination.
- Designed and implemented **scalable REST APIs using Node.js, Express/NestJS and MongoDB**, powering modules such as order management, production tracking, and material logistics.
- Engineered core ERP modules integrating MES, supply chain tracking, project management, and financial workflows using Node.js, Express.js, and SQL to track fabrication projects across modular work packages and locations.
- Implemented **shipment/container tracking, milestone-based billing, and payment approval workflows** to align production progress with financial and operational controls.
- Collaborated on system architecture and deployment, ensuring **scalable backend services and structured data models** to support multi-project manufacturing operations.

ApnaHimachal – Driver Discovery & Ride Coordination Platform

apnahimachal.com

- Developed a **full-stack platform connecting local drivers with users**, enabling driver discovery through **city-based search, route-based search, and available ride listings**.
- Built and maintained **admin panel, driver dashboard, and public landing website** using modern JavaScript frameworks and RESTful APIs.
- Designed backend services with **Node.js, Express/NestJS and MongoDB**, managing driver profiles, ride listings, route data, and search functionality.
- Implemented features for **ride publishing, driver onboarding, and route management**, allowing users to easily find transportation options between cities.
- Handled **end-to-end development from UI implementation to deployment**, including server configuration and cloud deployment on **AWS (EC2, S3)**.

Advance Solutions – Apple Authorized Mobile Repair Service Platform

myadvancesolutions.com

- Developed a **full-stack MERN application** for an Apple-authorized mobile repair service, including a public website and an admin management system.
- Built a **customer-facing landing platform** showcasing repair services, blogs, and enabling users to **book repair appointments and schedule pick-up/drop-off services**.
- Designed and implemented **RESTful APIs using Node.js, Express, and MongoDB** to manage services, customer leads, appointment bookings, and logistics operations.
- Created an **admin panel for dynamic content and operations management**, allowing administrators to manage services, blogs, leads, appointments, and pick-up/drop requests.
- Managed the **complete development lifecycle from UI implementation to deployment**, ensuring performance, scalability, and reliable production releases.

Survey Platform – Verdant Equanim

www.vereq.co/

- Worked as **Backend Developer and System Architect** for a survey platform consisting of an **admin panel and public survey website**.
- Designed and implemented **scalable backend APIs using Node.js, Express/NestJS and MongoDB** to manage surveys, templates, questions, and participant responses.
- Built advanced **reporting and analytics modules**, including survey result filtering, dynamic data tables, and visual insights for response analysis.
- Developed features for **survey link generation and distribution via SMS

Paraclean – Wellness & Parasite Cleansing Platform

www.paraclean.org/

- Worked as a **Full-Stack Developer** building a wellness platform consisting of an **admin panel and mobile application** focused on parasite cleansing, meditation, yoga, nutrition, and wellness education.
- Developed backend APIs using **Node.js, Express/NestJS and MongoDB** to manage user profiles, wellness content, herbal blends, exercise tracking, and program data.
- Built an **admin management system** allowing administrators to add and manage dynamic content such as cleansing programs, meditation guides, nutrition knowledge, and moon phase information.
- Implemented **user progress tracking and gamification features**, enabling users to follow wellness routines, track exercises and herbal blends, and earn points based on activity.
- Collaborated across frontend and backend to deliver a **scalable full-stack system** supporting structured wellness programs and personalized user engagement.

Task Manager – Project & Task Management Platform

rowthtech.com

- Architected and developed a **full-stack task management platform** for internal company operations, enabling teams to manage **projects, clients, and task workflows** in a centralized system.
- Built backend services using **Node.js, Express/NestJS and MongoDB**, supporting project creation, task assignment, workflow states, and team collaboration.
- Developed a Kanban board with React.js and Node.js, enabling dynamic task stage transitions to facilitate streamlined workflow tracking.
- Developed **time tracking and productivity reporting modules**, providing insights into task duration, team performance, and project progress.
- Contributed to **system architecture, frontend development, and deployment**, ensuring scalable APIs, responsive UI, and reliable production environments.

Platypus – Cryptocurrency Exchange Platform

platypusterminal.com

- Served as **Backend Developer and System Architect**, designing core backend architecture for a cryptocurrency exchange platform using **Node.js and Express**.
- Developed **user onboarding and authentication workflows**, including account registration, verification, and secure access control.
- Implemented a **subscription-based access system**, enabling tiered platform features and controlled access to market data.
- Built APIs to **aggregate and display real-time cryptocurrency market data**, supporting price tracking and market insights for users.
- Collaborated on overall platform architecture and backend services until early project termination prior to the **trading engine implementation**.

Leads Management System – Sales & Client Tracking Platform

rowthtech.com

- Developed a **full-stack lead management system** for internal sales operations using **Angular, Node.js, Express, and MongoDB**.
- Built modules to **manage leads, client data, call logs, and follow-ups**, enabling sales teams to efficiently track and convert prospects.
- Implemented features for **lead assignment, status tracking, and activity history**, improving visibility into sales pipeline progress.
- Designed **APIs and database schemas** to handle client records, sales interactions, and team workflows securely and efficiently.
- Collaborated on frontend dashboards and backend services to support **daily sales operations, reporting, and team performance monitoring**.

RowthAutos – Online Car Sales Platform

rowthautos.com

- Contributed as a **Full-Stack Developer** in building an online car marketplace enabling customers to browse, compare, and purchase vehicles.
- Developed and enhanced **frontend interfaces and user experience**, implementing responsive UI components and improving overall usability.
- Designed and integrated backend APIs using **Node.js, Express, and MongoDB** to support vehicle listings, product details, and user interactions.
- Implemented new modules including a **car loan calculator and vehicle comparison feature**, connecting backend logic with dynamic frontend components.
- Worked on **feature enhancements, UI redesign, and module integrations**, improving platform functionality and customer engagement.

Personal & Experimental Projects

- Built and maintained multiple **personal and experimental applications** to explore new technologies, improve development workflows, and solve practical problems.
- Developed projects including a **personal portfolio website, blogging platform, chocolate store (ChocoBliss), fitness tracker, and a finance tracker** for managing monthly budgets and expenses.
- Created productivity tools such as a **wedding management system (live product)** for guest onboarding, event management, image uploads, and automated reminders.
- Built **developer tools and utilities**, including Chrome extensions (e.g., image downloader) and custom **NPM packages for Express + MongoDB project bootstrapping with logging and starter architecture**.
- Developed an **exam question generator for teachers**, enabling easy exam paper creation with export support for **Word and PDF formats**.

EDUCATION

Masters of computer Applications

Himachal Pradesh University • Shimla • 2023

SKILLS

Frontend Technologies: HTML5, CSS3, SCSS, Bootstrap, React.js, Angular, Next.js
Backend Technologies: Node.js, Express.js, NestJS
Databases: MongoDB, SQL
Cloud & DevOps: AWS (EC2, S3), CI/CD Pipelines, Basic Server Deployment & Configuration
Healthcare Compliance & StandardsHIPAA, HL7, FHIR
